

## INNOVATION IN GROW / HORTICULTURAL LIGHTING

TAURUS TRS

- ➔ **TAURUS TRL** is an industrial grade LED system for horticulture, designed to operate in greenhouses. **TAURUS TRL** ensures high performance, reliability and flexibility in project design. It fits to any greenhouse geometry and suspension height.
- ➔ **TAURUS TRS** family is available in 200 W, 400 W and 600 W versions. It is a flexible and adaptable LED system for horticultural lighting.
- ➔ **LYBRA** is a modular, flexible and scalable solution that adapts to vertical farms with fixture-canopy distance between 15 cm and 35 cm.
- ➔ **SCORPIO** is an LED system for vertical farming operations that require the highest efficiency. A modular, flexible and scalable solution – a perfect match for vertical farms with fixture-canopy distance greater than 30cm. Also suitable for microalgae cultivation.
